vermeij@geology.ucdavis.edu

Accidenticulabrum nom. nov. is a replacement name for *Denticulabrum* Vermeij 1999, non Sohl, 1998.

Key words: Gastropoda, Prosobranchia, Buccinidae, *Accidenticulabrum* nom. nov., *Denticulabrum*, Miocene, nomenclature, Indo-West Pacific, Indonesia.

P. Bouchet (personal communication, January, 2000) has pointed out to me that *Denticulabrum* Vermeij, 1999 (p. 186) is preoccupied by *Denticulabrum* Sohl, 1998 (p. 64), a genus of Cretaceous trochid gastropods from Jamaica. Here I rename my genus as ***Accidenticulabrum*** nom. nov.

In my original paper, I had overlooked Vredenburg's (1922) assignment of the type species of *Accidenticulabrum*, *Fusus sangiranensis* Martin, 1906, to *Lacinia* Conrad, 1853. The Eocene genus *Lacinia* differs from *Accidenticulabrum* by having an indeterminate, adapically deeply notched outer lip instead of an externally thickened, adapically extended but unnotched terminal adult varix, and by lacking a basal labral tooth. *Accidenticulabrum* appears to be a phosine buccinid, whereas *Lacinia* may belong to the Melongenidae.
